## PAST AND ONGOING PROJECTS

- **Learning Human-Object Interactions in Real 3D Scenes** (*ongoing*)  
Summary: We are interested in building systems that comprehend human motion and interactions in 3D environments and are actively working on it.
- **3D Object Detection and Tracking in Outdoor LiDAR Scans.**  
Summary: We worked on benchmarking various SoTA methods across multiple datasets for the task of outdoor 3D Object Detection and Tracking, which was a preprocessing step to remove dynamic objects from 3D scans towards building a 3D City Map. This project was carried out under the supervision of **Prof. Avinash Sharma** and **Prof. Charu Sharma**.
- **Vision-Based Techniques to Evaluate Effectualness of Micro Suturing by Trainee Neurosurgeons**  
Summary: We designed and implemented a vision-based technique for automated evaluation and scoring of the micro-suturing performed by trainee neurosurgeons. This project was done in collaboration with AIIMS, Delhi.
- **Mesh-Based Cloth Simulation**   
Summary: Implemented and proposed slight upgrades to “Learning Mesh-Based Cloth Simulation with Graph Networks” as a part of a course project at IIIT-H.
